

Mayur Patil

Aspiring Product Manager looking for Product Internship and APM opportunities.

📞 9607519712 ✉ mayurpa2004@gmail.com 🔗 LinkedIn 📁 Portfolio 📍 Jalgaon, India

PROFESSIONAL SUMMARY

BBA student who has shipped two India-first digital products from research to launch — TripKhata (group expense tracking PWA) and IRON AI (AI fitness assistant for hostel students). Skilled in user interviews, MVP scoping, feature prioritization, and iterating based on real user feedback. Seeking APM, Product Intern, and Product Analyst roles at startups and early-stage product teams.

EDUCATION

SSBT Arts, Commerce & Science College Bambhori | Jalgaon

Aug 2023 - May 2026

BBA

CGPA : 8

Mahatma Gandhi Vidyalaya Varangaon | Jalgaon

CGPA : 80%

12th

PROJECTS

TripKhata - Group Expense Tracking PWA | 📁 Demo

Builder

- Interviewed 20+ travelers to map pain points around group expense splitting, settlement confusion, and transparency — findings directly shaped MVP scope and feature priorities.
- Designed no-login onboarding enabling users to create a trip and log the first expense in under 90 seconds, reducing activation drop-off.
- Built minimum-transfer settlement algorithm reducing group transactions from 15+ potential transfers to 3–4 optimized settlements.
- Implemented offline-first PWA architecture and WhatsApp-native PDF export — validated as the #1 user-requested feature — improving usability in low-connectivity travel environments.
- Iterated onboarding and settlement workflows across 2 post-launch feedback cycles based on observed real-user drop-off patterns.

Technologies / Tools Used : Figma, Notion, Chatgpt, Github

IronAI — AI Fitness Assistant for Hostel Students | 📁 Demo

Builder

- Conducted 15+ user interviews and competitor analysis to identify consistency and motivation as the top retention blockers for beginner hostel-student fitness users.
- Scoped and shipped MVP — streak tracking, rest timers, workout history, progress visualization, offline mode — within 6 weeks using a severity-vs-effort prioritization matrix.
- Ran 3 structured feedback cycles with 15+ real users; habit-building mechanisms improved self-reported workout consistency by ~40% after the second iteration.
- Maintained low-friction UX as a core constraint, reducing time-to-first-workout to under 60 seconds validated through usability testing.
